STECKLER'S Superfine Boxed Dahlia Collections

Our Dahlias are all grown on fertile, sandy loam and we believe the roots we produce are of the very highest quality that you can obtain. Our roots are not over large in size as they are grown on clay and heavier soils.

These collections are specially boxed, however, the right is reserved to alter any of these collections, giving equal or better value in the same color range, in case of an unexpected shortage in some varieties.

STECKLER LAWN GRASS SEED

CARPET GRASS—Splendid lawn grass for the South. Better than Bermuda for poor, sandy soil and semi-shady lawns. It is a perennial, spreading by creeping stems which root at every joint, thus forming a close, compact turf. Germinates in 20 to 30 days if soil is kept properly moist. For a closely matted lawn sow at the rate of 5 pounds per 1000 square feet from March until July. We offer only stock that has been carefully analyzed for purity and germination. **Postpaid, lb., 40c; 5 lbs., \$1.75.**

ST. AUGUSTINE GRASS—In Florida and to an ever increasing extent in New Orleans, the shady lawn problem has been solved by the use of this perennial creeping grass. It is a deep green, broad-bladed grass, creeping by means of surface runner. It is somewhat similar to Carpet Grass, except it has a better color and stays green during ordinary winters. Seed is not available, but lawns are established with rooted runners. A bushel will plant from 150 to 200 square feet, depending on how close it is set. **Not prepaid, bushel \$1.50; 10 bushels, \$14.00.**

FANCY BERMUDA GRASS—The most dependable summer lawn grass for Southern Gardens. Makes a tough, even, clumpless turf that recovers quickly after cutting. Lasts for years and stands long, hot, dry summer without injury. Succeeds on nearly all types of soil. Germinates in 20 to 30 days with proper soil moisture. For good, heavy stand, sow at the rate of 5 pounds to 1000 square feet, from March to September. The Bermuda Grass seed we offer is the finest, leaf cultivated turf producing strain. **Postpaid, lb. 40c; 5 lbs., \$1.75. Not prepaid, 10 lbs., \$2.50; 100 lbs., \$23.00.**

HULLED BERMUDA—We offer this extra fancy Bermuda Grass with the hulls removed, a new process which gives much quicker germination. Under favorable moisture and soil conditions, Hulled Bermuda Grass will germinate in 8 to 10 days, almost as quick as Rye Grass. It is more economical because half the quantity is necessary to sow 100 square feet of lawn. Be sure to specify hulled seed when ordering, as otherwise the unhulled seed will be shipped. **Postpaid, lb., 50c; 5 lbs., \$2.25. Not prepaid, 10 lbs., \$3.70; 100 lbs., \$35.00.**

COTTON SELECTED VARIETIES

Planting time, March and April. One bushel is required to plant one acre. Thoroughly break and prepare the ground early. Rows should be 3½ to 4 feet apart and hills 12 to 14 inches apart in the row. When the cotton comes up it should be off-barred deep while it is small in order to let the heat of the sun strike the beds. As the plants get larger, shallow down and towards the last, cultivate very shallow. Always keep the top crust of the ground broken in dry weather, as it prevents it from losing its form. Never stop plowing for wet weather until the ground turns in slices; then quit immediately until it dries off. Never lay by until the middle of August. The first week in April has been found to be the best time for planting cotton.

Note—All of our Cotton Seed is free from Boll Weevil. These are all good varieties which have been thoroughly tested and recommended by Agricultural Colleges and Experiment Stations of the Southern States.

Hairy Peruvian Alfalfa

LESPEDEZA

LESPEDEZA or JAPAN CLOVER—One of the best clovers that can be planted in the South. Planted at the rate of one bushel to the acre from December to May. If sown on sod the land should be first scarified with a disc harrow in order to give the seed a good seed bed. Thrives on very poor soils and continually improves them, at the same time yielding a highly profitable and nutritious forage. One bushel to the acre. 25 lbs. to the bushel.

1 lb., 40c; 5 lbs., \$1.50, postpaid. Write for prices on larger quantities.

KOREAN LESPEDEZA

Korean is the earliest of the annual Lespedezas, coming up first and growing rapidly, therefore giving earliest grazing of any lespepeza. Grows taller than Common, larger plant and coarser, with broader leaflets. Korean matures earlier than other lespedezas, seed beginning to ripen in September. The only variety suitable for Northern half of the United States. Korean is fine in combination with grain for it will drop seed before time to break the ground to sow grain in the fall. Korean is fine in pasture combinations, and an abundant hay yielder.

1 lb., 25c; 5 lbs., \$1.00, postpaid.

Lespepeza, Korean

KOBE LESPEDEZA

Kobe has certainly earned a home for itself on Southern farms, particularly where long periods of drought occurred, for Kobe came through these droughts where Common Lespepeza was burned out. This drought resistance is a life-saver to a farmer, and is no doubt due to the very extensive root system and its rank growth, with larger than ordinary leaves. We have seen Kobe 38 inches tall but usually it is 2 to 2½ feet tall. We have seen yields of 4 tons per acre with Kobe. It is excellent for hay and pasture alike. Can be sown with oats, also with orchard grass and red top or herd's grass.

1 lb., 25c; 5 lbs., \$1.00, postpaid.

ALFALFA

HAIRY PERUVIAN ALFALFA—Sow thirty pounds per acre, from January to April for Spring and September to November for Fall. Withstands colder weather better than Alfalfa or Lucerne and usually produces a heavier yield of hay. A perennial plant. We highly recommend this variety for hay and pasture.

1 lb., 35c; 5 lbs., \$1.50, postpaid. Not prepaid, 10 lbs., \$2.10.

SEED RICE

Rice can be grown on upland as well as on flooded lands. Any ground having a reasonable amount of moisture will make fair crops of 20 to 40 bushels per acre. Plant about April, 20 seeds in each hill in rows about 1½ feet apart.

LADY WRIGHT—Well known medium grain.

1 lb., 20c, postpaid. Not prepaid, 10 lbs., 75c; 25 lbs., \$1.50.

WILD RICE—Best time to sow is in Spring, although it can be sown any time. Thoroughly soak seed in water so that it will sink into the desired situation, sow in shallow water not over three feet deep and from this depth into the shore. A still day should be chosen for sowing so that the seed will not drift out to deep water. Very attractive for wild fowl on game reserves and small lakes. Sow 20 pounds per acre.

1 lb., 90c; 5 lbs., \$3.85, postpaid.

Sorghum Is Excellent for Forage, Grain and Syrup

Especially adaptable to the South.

Early Amber Cane

EARLY AMBER SORGHUM—Exceedingly popular for forage, relished greatly by stock, because of sweetness. Makes good syrup but not quite as good for syrup as the Orange because of the small stalk. 1 lb., 20c; 5 lbs., 75c, postpaid. Write for quantity prices.

EARLY ORANGE SORGHUM—Equally as valuable as the Amber for forage but on account of the longer growth it is better for syrup making. About ten days later than the Amber. Planting and culture same as Amber.
1 lb., 20c; 5 lbs., 75c, postpaid. Write for quantity prices.

JAPANESE HONEY DRIP CANE—Good syrup producer, splendid forage crop and if drilled thickly makes excellent hay. Very prolific, makes about 200 gallons of highly flavored syrup per acre. For syrup sow 15 pounds per acre. We recommend this highly.

CROTALARIA SPECTABILIS

World's Best Cover Crop. Build up your soil with this new legume. This new legume produces more humus and more nitrogen per acre than any other crop. It is not a pest and can be easily eradicated and reseeds itself each year under favorable conditions. It is used as a summer cover crop and soil builder in groves, orchards, vineyards, etc. Livestock will not eat it, therefore you will not be tempted to cut it for hay when your ground needs it so badly. This should be planted as soon as danger of frost is past and at a time when there is plenty of moisture in the soil, and can be planted as late as July, either broadcast or drilled. Ten pounds of seed is required per acre for broadcasting and half of that amount if drilled. Grows from 5 to 10 feet depending entirely on the locality.

STRAWBERRY SHOOKS or DIRT BANDS

STRAWBERRY SHOOKS or DIRT BANDS—Eggplants, muskmelons and early cucumbers pay well if they come early into the market. In order to have them early, it is a good plan to start them in a cold frame in what are called "Dirt Bands." This is a box 4 inches square and 4 inches deep, without bottoms. These are placed in a frame and filled up with good rich soil, and five or six seeds in each box. When the plants come up, thin them out to one or two in each box. Before using dirt bands, wet them thoroughly before handling or they will be apt to break at the grooves, as they are made of thin veneered wood.
60c per 100; \$3.00 per 1,000, not prepaid.

BEAUTIFY YOUR HOME GROUNDS YOU CAN HAVE FLOWERS ALL SEASON

Flower seeds require a little more care in sowing than the vegetable seed. The ground should be well pulverized and light enough not to bake after a rain. Some of the more delicate and finer varieties are better sown in boxes or seed pans, where they can be handled and protected from hard rains or cold weather, the other kinds do not transplant well, and are better sown at once where they are to remain.

All flower seeds in packages are mailed free of postage to the purchaser. Where there is more than one color, we generally import them mixed, as we find that most of our customers do not wish to purchase six packages or more of one variety to get all colors. One package of Asters, Zinnia, Phlox, Chinese Pink, Stocks, Petunia, Portulaca and others will always contain an equal mixture of the best colors.
